

Service Management Essentials

Course Overview

The primary goal of IT service management is to deliver quality services that enable desired business outcomes. To accomplish this, service providers often face a precarious balancing act of managing customer relationships and requirements, understanding and managing demand and patterns of business activities, aligning internal and external suppliers, and maintaining fiscal responsibility by making sound IT investments. If you want to increase the value of your IT services to the business, you should focus first on these customer-facing processes.

What You Will Learn

- ▶ How to leverage governance, frameworks, standards, and best practices
- ▶ How to design and implement aligned incident management and service request processes
- ▶ Trending and root cause analysis techniques for proactive problem management
- ▶ A logical approach to implementing an efficient change management process
- ▶ Strategies and templates for successful service level management
- ▶ How to assess the maturity of your service management processes and develop a road map for success

Who Should Attend

- Managers, process owners, practitioners, and stakeholders who need to gain an in depth understanding of how to deploy and/or assess and improve the core service management/ITIL Processes including: Service level management, incident management, problem management, and change management
